(54) ORAL COMPOSITION

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain an oral composition capable of improving an unpleasant flavor associated with a nonsteroidal anti-inflammatory drug by including a combination of plantago herb and Glycyrrhiza in a nonsteroidal anti-inflammatory drug.

SOLUTION: This composition is obtained by including plantago herb and Glycyrrhiza in an aniline-based or phenylpropionic acid-based nonsteroidal anti-inflammatory drug, the former including acetoaminophenone and the latter ibuprofen. The compounding ratios of these herbs are 2 to 40 pts.wt. for the former and 0.3 to 15 pts.wt. for the latter as the primary herbal medicine per 1 pt.wt. of the nonsteroidal anti-inflammatory drug. The daily oral dosage is 45 mg to 3 g as the nonsteroidal anti-inflammatory drug for an adult and divided into one to several portions. Use of these herbs makes the oral composition a cold treating agent or the like easily takable.
